CERTIFICATE

TO WHOMSOEVER IT MAY CONCERN

Ms. Vidushi Shrivastava , B.Pharm student of **Institute of Pharmaceutical Education & Research, Borgaon (Meghe), Wardha** has undergone in plant training at our factory from **02/06/2024** to **30/06/2024**. She was trained in different department like Production, Quality Control, Quality Assurance, R&D & relevant department.

During her training period She made herself conversant with various processes employed in the manufacture of our pharmaceutical specialties. She also made herself aware of controls and responsibilities of pharmaceutical production and test.

She took keen interest in the training imparted. She was punctual and hard worker. We find her keen analytical & disciplined.

Representative Document for Assignments of UG and PG students 2023-24

Assignment No-02

Name- Sakhi Rajyachandane
Roll No - 81
Sub - Novel drug delivery system
Date - 31-07-23

Que 1) - ~~Give~~ Coacervation phase separation technique in microencapsulation

→ Coacervation microencapsulation is the phase separation of one or many hydrocolloids from initial solution and the subsequent deposition of the newly formed coacervate phase around the active ingredient suspended or emulsified in the same reaction media.

The general outline of the process consists of three steps carried out under continuous agitation.

(a) formation of three immiscible chemical phases -
A liquid manufacturing vehicle phase, a core material phase and coating material phase.
To form the three phases, the core material dispersed in a solution of the coating polymer, the solvent for the polymer being the liquid manufacturing vehicle phase.
The coating material phase, an immiscible polymer in a liquid state, is formed by utilizing one of the methods of the phase separation coacervation, i.e. by changing the temperature of the polymer solution, or by adding a salt, non-solvent or incompatible polymer to the polymer solution, or by inducing a polymer-polymer interaction.

(b) deposition of the coating -
It consists of depositing the liquid polymer coating upon the core material. This is accomplished

(Dr. R. O. Ganjiwale)
Principal
PRINCIPAL
Institute of Pharmaceutical Education & Research
Borgaon (Meghe), Wardha

by controlled, physical mixing of the material in the manufacturing vehicle, deposition of the liquid polymer coating around the core material occurs. If polymer is adsorbed in the interface formed between the core material and the liquid vehicle phase, adsorption phenomenon is a prerequisite to effective coating. The continued deposition of the coating material is promoted by a reduction in the total free interface energy of the system, brought about by the decrease of the coating material surface area due to the clearance of the liquid polymer droplets.

⑤ Rigidization of the coating - It involves rigidification of the coating, usually by thermal, crosslinking or desolvation techniques, to form a self-sustaining microcapsule.

1) Temperature change method:-

a) By thermal change - phase separation occurs when dissolved polymer form immiscible liquid droplets by change in temperature. As temperature decreases, one phase becomes polymer-poor (the microencapsulation vehicle phase) and the second phase becomes polymer-rich (the coating material phase). At this stage if a core material is present under proper agitation conditions, the liquid polymer droplets coalesce around the dispersed core particles and form the embryonic microcapsules.

Example: 1. Core material - ascorbic acid
2. Coating material: ethylcellulose 3. Core: coat ratio is 1:1
4. Solvent - cyclohexane 5. Phase separation - by temperature change ethylcellulose is soluble in cyclohexane only at higher temperature therefore when temperature is lowered, the dissolved

(Dr. R. O. Ganjiwale)
Principal
PRINCIPAL
Institute of Pharmaceutical Education & Research
Borgaon (Meghe), Wardha

of cellulose sheets to separate out and get deposited
in core material

b) by incompatible polymer addition :- in this technique
phase separation occurs by addition of dissimilar
(incompatible) polymers to the existing polymer solution.
At particular concentration of polymer, dissolved
polymer get separated in the form of liquid polymer
droplet and thus microencapsulation can be
accomplished.

Example - 1. core material - Methylene blue HCl drug
2. coating material - ethyl cellulose 3. solvent -
toluene 4. phase separation - by addition of
incompatible polymer polybutadiene (incompatible
with ethyl cellulose)

c) By non-solvent addition :- in this process the phase
separation (solid utilization of polymer) is induced
liquid polymer by addition of a liquid that is a
non-solvent for a given polymer. the resulting
immiscible liquid polymer can be utilized to effect
microencapsulation of an immiscible core material

Example - 1) core material - methylscopolamine
2) coating material - cellulose Acetate Butyrate
3) solvent - Methyl ethyl ketone 4) phase separation -
by addition of incompatible solvent isopropyl alcohol

d) By salt addition :- soluble inorganic salt is
generally added to the aqueous solution of
certain water soluble polymer to cause phase
separation

Example - 1) core material - vitamin C 2) coating
material - Gelatin 3) solvent - water and oil
4) phase separation - by addition of 20%
Sodium Sulphate solution

(Dr. R. O. Ganjiwale)
Principal
PRINCIPAL
Institute of Pharmaceutical Education & Research
Borgaon (Meghe), Wardha

1) By polymer-polymer interaction (complex coacervation phase) - in this process phase separation (polymer rich phase) is induced by the interaction of oppositely charged poly electrolytes can result in the formation of a complex having low solubility in solvent. It involves neutralization of charges on the colloid and depends primarily on pH of the solution. The encapsulation process consist of five steps -

- 1) preparation of hydrophilic colloid solution
- 2) Addition of second hydrophilic colloid solution of opposite charge to induce the coacervation at a particular pH
- 3) deposition of the polymeric complex around the drug particles
- 4) gelation of coacervates
- 5) hardening of microcapsules.

Example - 1) core material - methyl acrylate
2) coating material - Acacia and gelatin (2% each pH = 4.5) 3) solvent - water.

4) phase separation - by complex formation - induced by -

1. Non solvent
2. temperature change
3. salt / incompatible polymer
4. polymer-polymer interaction.

Seminar Schedule for the Week (19/06/2023-24/06/2023)

Sr. No.	Name of Student	Topic	Date	Time
Pharmaceutics				
1.	Mr. Rushikesh Wankhade	Structure of skin and problems related to skin	19/06/2023	3.00-4.00
2.	Ku. Alka Bhoyar	Clinical significance of bioequivalence studies	20/06/2023	3.00-4.00
3.	Ku. Anuja Chavan	Drug interactions	21/06/2023	3.00-4.00
Quality Assurance				
1.	Mr. Vaibhav Revanwar	Role of quality system and audit in pharmaceutical manufacturing environment	19/06/2023	3.00-4.00
2.	Ku. Bhakti Tapas	Air based hazards	20/06/2023	3.00-4.00
3.	Ku. Hina Amzare	Container and closure for pharmaceuticals	21/06/2023	3.00-4.00
Pharmacology				
1.	Mr. Tejas D. Pimple	Hormonal contraceptive	19/06/2023	3.00-4.00
2.	Mr. Vinay V. Sarode	Beta-lactam Antibiotics	20/06/2023	3.00-4.00
3.	Ms. Anshal Sahare	Chronopharmacology	21/06/2023	3.00-4.00

Seminar Schedule for the Week (26/06/2023 - 01/07/2023)

Sr. No.		Name of Student	Topic	Date	Time
1.	Pharmaceutics	Ms. Ashwini Sanap	Cleansing and care needs for face, eye lids, lips, hands, feet, nails.	26/06/2023	3.00-4.00
2.		Ms. Chetna Dhone	Nucleic acid based therapeutic delivery system.		
1.		Ms. Chitrangani Chaudhari	Computer simulation in pharmacokinetics and pharmacodynamics.	27/06/2023	
2.		Ms. Kiran Yerne	Biodistribution & pharmacokinetics		
1.		Ms. Purwali Chaudhari	Biopharmaceutics consideration in drug product design and in vivo drug product	29/06/2023	
2.		Ms. Rutvika Barudwale	Niosomes, aquasomes, phytosomes and electrosomes.		
2.	Quality Assurance	Ku. Komal Dafare	Pharmaceutical Industry Developments	26/06/2023	3.00-4.00
2.		Ku. Namrata Gawali	Fire And Explosion		
1.		Ku. Neha Nagdeve	Auditing of quality assurance	27/06/2023	
2.		Ku. Sai Pangul	Multidisciplinary nature of environmental studies		
1.		Ku. Samiksha Khandade	Introduction To Qualification	29/06/2023	
2.		Ku. Sharayu Pawar	Lyophilization technology		
1.	Pharmacology	Ms. Darshana Shambharkar	Schedule Y	26/06/2023	3.00-4.00
2.		Ms. Namrata Waghmare	Rational drug design		
1.		Ms. Pragati Zalwade	Drug use in constipation	27/06/2023	
2.		Ms. Riya Tiwari	Acute dermal toxicity		
1.		Ms. Rujuta Shinde	Prodrug design	29/06/2023	
2.		Ms. Sakshi Nagre	Informed Consent Process in clinical trials

Certificate

This is to Certify that

Shri./Ms. Nikhil Shivaji Wagh

of Master of Pharmacy (Semester - II) class has
completed experiments of
Subject - **Pharmaceutical Quality Assurance-II**
in the laboratory of this Institute in the year 2023-2024

Lecturer in-charge

Date : 18/04/24
